Over 1,000
projects in Poland
and abroad

Euro-Ekol was founded by **Jarosław Ancerowicz**, who currently serves as President of the Board, and from the very beginning has focused on developing new solutions for the car wash industry. Since 2004, the founder's son, **Mariusz Ancerowicz**—currently Vice President of the Board—has been actively involved in the company's development, contributing to its dynamic growth.
The combination of experience and the young, modern mindset from two generations has become the ground for the dynamic improvement of the technology we produce. From the very beginning, we have focused on manufacturing car washes that combine high cleaning efficiency, reliability, and cost-effectiveness. Our company is not only a manufacturer but above all, a partner to investors, providing them with support at every stage of their investment.

Development based on experience.
Each new project is a source of knowledge for us. We observe the changing needs
and expectations of car wash users, without forgetting about investors, for whom the highest possible profitability of this business is what matters the most. Over the years, we have built up expertise that now constitutes one of the fundamentals of the
Euro-Ekol. The result of this journey is the completion of over 1,000 projects both domestically and abroad. Our representatives are already operating in over a dozen European countries.

Today, we are already looking toward the future.
Today's **Euro-Ekol** is the result of 30 years of experience, hundreds of project decisions, and consistent technological development. However, the company's story remains an open chapter. We continue to hire new specialists, develop new concepts, expand and modernize our machinery. We strive to identify new market needs and seek ways to ensure that **Euro-Ekol** car washes remain a standout product in this industry.

Innovative touchless car wash

IMPLEMENTING THE RESULTS OF R&D WORK TO INTRODUCE AN INNOVATIVE IMPROVED PRODUCT - ECOLOGICAL TOUCHLESS CAR WASH

Euro-Ekol was the first company in Europe to equip touchless car washes with a water-saving system developed by scientists at the West Pomeranian University of Technology in Szczecin. The system makes it possible to use water resulting from the rinsing of an osmotic membrane containing a significant amount of minerals undesirable in the vehicle washing cycle. In this way, the reclaimed water is filtered so that it can be used in the further stages of car washing.

In washing machines from other manufacturers, this water is treated as waste and discharged into the sewer system. The implementation of the product innovation in conjunction with the technological process innovation allows water savings at the level of 35% at the car wash. In view of global warming, water scarcity is to be expected, which will make it easier for our customers to successfully apply for EU funding for such an innovative investment..

PORT KATY
MYJNIA 24h
PORT KATY
www.portkaty.pl

The utility container is manufactured with a steel frame, and side walls and roof are made of sandwich panels. The container frame is coated with polyurea. The coating is a spray-on covering based on a two-component resin system designed to secure protection against moistureand temperature fluctuations. It features an incredibly high resistance to mechanical damageas well as exposure to acidic and alkaline substances.

A complete washing system, a water treatment system, and a custom-selected heating medium are installed inside. The container also features a completeelectrical distribution panel and lighting system. All containers are manufacturedat our own production facility. We carry out orders for any capacity,which allows us to adjust to building permits regarding construction.

TURBO PIANA

The technical wash module is based on AISI 304 stainless steel structure. The outer casing (including the door) is made of 40mm-thick PIR board. This increases the thermal insulation of the module. To improve the aesthetics, we use a modern design finish with dibond panels and RGB LED lighting. The module contains the complete washing installation, including the necessary accessories to operate up to four stations.
All modules are made in our production facility. The visual identity elements on the module can be produced according to the customer's design and in any colour scheme.

Modular car washes

This system is the best solution for investors who have their own space that they would like to use as a machine room. In this case, the washing technology is mounted on a prefabricated frame treated with polyurea.

Rack-mounted car washes

PRODUCENT MYJNI BEZDOTYKOWYCH
euro ne

Single-station car wash

The Euro-One 1-station washing unit is designed for the washing and maintenance of passenger vehicles, vans, trucks, construction machinery and other objects. The car wash can be configured for use with coins or tokens, as an option for the client's own use. It can be run without the need for employees to purchase time, without fiscal records.

Carport

The carports for the car wash bays are designed and manufactured at our factory. The steel structure is hot-dip galvanized and undergoes a passivation process.

The carport can be made of trapezoidal sheet metal with a flat roof or supported by arches and a multiwall polycarbonate roof, which makes it transparent and provides natural light for the car wash bays.

The dividers between the car wash bays are made of 600 g/m² banner film printed using UV technology.

The rainwater drainage system is designed to prevent the accumulation of leaves and clogging. We do not use a plastic drain system, instead, we use steel componentsprefabricated in our factory.

The innovative illumination system is activated by a twilight sensor and causes the perimeter lighting of the car wash carport and the navigation lights at the washing bays to turn on. The remaining lights turn on only when the vehicle begins to wash. The 100W LED floodlights provide ideal illumination of the surfaces being washed. The light source, based on Samsung technology, is protected by a five-year warranty.

Exterior elements such as the parapet and pole casings (optional) are made of DIBOND. The signage is illuminated with LED or RGB LED technology, combined with 3D letters to enhance the facility's visual appeal.

Our company's own machine park, design and engineering department allow us to meet our customers' custom orders, even in small-scale production. Each project is adapted to the customer's specific needs, thanks to our graphics department.

Comprehensive Investment Realization

We aim to provide comprehensive service to every customer. The range of our services is adapted to the individual needs of anyone interested in an investments associated with opening a car wash. Our strengths, allowing us to accelerate the work involved in the investment, include:

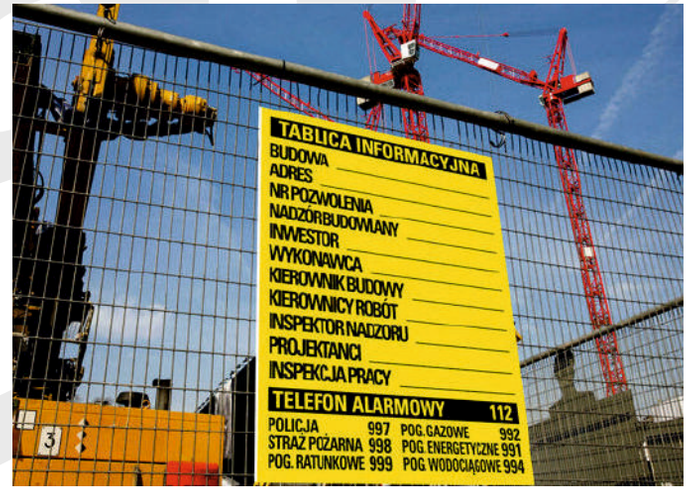

Analysis of individual client requirements for optimal adaptation of our equipment to the conditions in which the car wash will operate; expert consulting including analysis of profitability based on various criteria.

Comprehensive assistance in identifying funding opportunities for the car wash construction project.

Providing all the necessary information regarding the preparation of required documents for the investment start.

Preparation of repeatable construction designs for adaptation. Construction works related to floor preparation at the car wash bays, water, sewage, and electrical systems connection, with project supervisionprovided by our team.

Installation and commission of the car wash equipment, including its structure, done by qualified staff; training for investors concerning the functioning of the car wash; and on-site supervision by a Euro-Ekol service specialist on the day the car wash opens.

The upgrade enriches your car wash a dashing look and new features to attract more customers. Upgrade will also reduce the operating costs of the car wash resulting in increase your profits!

Carwash Modernisation

The modernisation of your car wash will provide your customers with the highest quality and most effectivecleaning. Compared to other companies, we use softened waterin all of the wash programs, which allows us to achieve the desired final result without spots on the car's body. In addition, the wide range of innovative and exceptionally effective wash programs we offer will satisfy even the most demanding customers and set your car wash above the competition.

Modernizing your car wash is an excellent opportunity to enhance your business with additional equipment such as: contactless payment, a coin-changing machine, a change-dispensing system, a compressor,a vacuum cleaner, and a chamois dispenser.

A new carport design will attract customers' attention and invite them to use your car wash services. The carports we offer are known for their original, eye-catching design, functionality, and high-quality finish. The carports are additionally equipped with information and advertising banners, as well as an RGB LED illumination system customized to the customer's colour preferences and 3D writings ensuring excellent visibility for the car wash even during night-time hours.

Production

The assembly of car wash equipment and the installation of the necessary accessories take place at our modern factory, with a high-end machinery park, continuously modernized through financial support programs implemented by the EU. The car washes manufactured at our facility are equipped with components and subassemblies from leading European manufacturers, thus meeting the highest standards for this type of devices and keeping up with the latest trends. All of our actions, combined with use of IT systems designed for support and quality control—from concept to final installation—are a strong guarantee of the high quality that our car washes consistently deliver.

Mobile car wash management system

To control the car wash, a microprocessor-based on Siemens PLC controller is used. Operating parameters are adjusted and monitored via a large touchscreen display. Communication between the car wash and the customer is handled by a proprietary control application developed by employees of our company's IT team.

It provides full control over the processes taking place in the car wash. Thanks to innovative solutions, the user can easily change the car wash's parameters, read errors and messages, as well as the operating time of the pressure pumps for the nozzles and brushes between maintenance checks, and check the turnover at individual washing stations. Optionally, there is possiblity to automatically send alarms and messages from the car wash, and once connected to the internet, the customer gains access for system management that is entirely remote via our app installed on a tablet or smartphone.

Euro-Ekol Cloud Services

Euro Ekol Cloud Services is a modern web application that provides investors with access to key financial data and comprehensive statistics 24 hours a day from any device connected to the Internet. A complete history of financial transactions, key top-ups, and payment transfers, as well as statistics, are presented in the form of easy-to-read tables and charts. All data can be filtered by date and exported to CSV format, which enables further processing on external IT systems or even in a spreadsheet. In addition, the system sends daily and monthly revenue reports via email, sorted by payment method, so the investor knows how much their car wash earns on an ongoing basis.

The module for managing fleets is a unique solution on the market. Fleet managers can log in and top their accounts themselves using a credit card or instant transfers, allocate the deposited amount among their keys, and generate usage reports for individual keys. The app automatically issues invoices — depending on preferences — after each top-up or for a specified period. As a result, the key card system becomes an even more effective tool for attracting fleet customers.

App Euro-Ekol

Carwash, payments and rewards program

Mobile payments
Safe and quick cashless payments integrated with Przelewy24 and BLIK.

Digital client account.
Modern, no cards rewards increasing the number of clients.

Reward points exchange.
Automatic billing and redemption of reward points for services realistically promoting regular clients.

ECOSYSTEM, THAT RETAINS THE CLIENT

Euro-Ekol App is our strategic step. We're bringing traditional customer service to your smartphone, closing our ecosystem in one cashless device.

The MAXI mat cleaner is an advanced solution for hand car washes, touchless car washes and detailing centres. It improves the customer experience, speeds up mat cleaning and adds convenience.

DURABLE AND RELIABLE

Made from corrosion-resistant INOX stainless steel, the machine withstands harsh weather conditions. Its robust construction and efficient mechanisms ensure long service life and safe year-round operation.

EASY SELF-SERVICE OPERATION

Customers pay with a token, coins or a card*, then clean their mats themselves. Simply insert the mat into the machine and move it up and down. The process is quick and requires no training.

** Payment options can be customised on request.*

MULTI-STAGE CLEANING PROCESS

01

POWERFUL VIBRATION

Removes dry dirt, sand and debris from deep within the mat.

02

PRECISION BRUSH

Brushes thoroughly to restore the mat's look and softness.

03

STRIP BRUSH

Cleans the surface and restores a neat appearance.

Height:	800 mm		

PERFECT FOR HAND AND TOUCHLESS CAR WASHES

A reliable solution that improves throughput and customer convenience.

24/7 Service

Our service team consists of highly qualified employees with many years of experience in the company. Their seven-day work cycle guarantees a rapid response upon reporting a malfunction, which helps minimize downtime. These measures are purely preventive in nature, with the primary goal of ensuring the longest possible trouble-free operation of the car wash. Each service department employee has at their disposal a service vehicle fully equipped with tools and replacement parts, and the efficiently functioning service management structure is able to provide appropriate technical support at any time. All of these actions are aimed at ensuring the investor's complete comfort and creating the best possible conditions for operating a touchless car wash business.

Warehouse staff, supported by a software application developed specifically for our needs, promptly process shipments of consumables and chemicals ordered by our customers. Timely delivery is ensured by courier companies with many years of experience in the market as well as our company's own transport fleet.

Service work is performed 7 days a week.

Euro-Chemia was founded out of a passion for chemistry and the automotive industry. The company's founders, who originated in the touchless car wash industry, identified a gap in the market—self-service car washes needed products that combined effectiveness with visual appeal.

Today, we offer over 10 products for self-service car washes and retail customers. Each formula is developed in our laboratory, tested under realistic conditions, and documented in accordance with technical requirements.

More Quickly

More Efficiently

More Accurately

Our extensive fleet of service vehicles and trucks, including specialized MAN truck-trailer combinations with HDS, helps us deliver equipment to our customers faster and more efficiently than a shipping company. Our qualified installation teams construct car wash stations using modern power tools and mobile platforms, eliminating the need for the client to provide a crane during construction. A 6-bay car wash and larger containers are also no problem for us! We are licensed for oversized cargo transport, and one of our vehicles is equipped for this purpose; we do not charge an additional fee for this service.We deliver our products throughout Europe.

Our service teams, on the other hand, use smaller delivery vans equipped with professional workshop and tool compartments. All of this is to ensure we reach our customers quickly and safely, and to perform service efficiently. We know exactly how important it is to keep washing equipment up and running.

International Trade Fairs

Our company successfully participates in International Trade Fairs. Since 2004, we have received a number of awards, which are a clear sign of appreciation for the quality and level of our work. We are particularly happy about winning the Grand Prix of the 17th International Petrol Station Fair in the Product of the Year 2010 competition “PRESIDENT'S LAMP” OF THE POLISH CHAMBER OF LIQUID FUELS - for a touchless multi-station car wash with a solar system. This award validated our decision to manufacture our own car wash and motivated us to keep developing further. Our success at the fair was the result of years of work of the entire team.

Winning the Grand Prix of the 28th International Fair 2023 in Warsaw for an energy-efficient innovative touchless car wash with heat pump and photovoltaic shed is the greatest distinction for us in the entire history of Euro-Ekol. No company producing touchless car washes had previously won such a significant award at the International Fair in Warsaw.

We consolidate our presence in European markets by participating in fairs held in Prague, Nitra, Bratislava, Stuttgart, Amsterdam, Belgrade, Bucharest, Riga and Budapest, and previously also in Minsk, Belarus, and Moscow. In Poland, you can meet us at trade fairs in Warsaw and Poznań.

The self-service touchless car wash with photovoltaic shed presented at the 2023 trade fair in Warsaw received the main Grand Prix prize.

We are building our network of car washes

List of car washes from our network:

EUROMYJNIE is the most modern carwash network in Poland. We established it in 2021. Cooperation with many renowned brands has resulted in the construction of dozens of car washes in attractive locations throughout Poland. At our car washes we use all the latest technology. By having our own network of car washes, we are able to promote the brand and constantly monitor the needs of the market. Potential investors have the opportunity to test our product.

COOPERATION WITH moya

While continuing the expansion of our car wash network in 2022, we started cooperation with the moya petrol station network thus increasing the number of our car washes to several dozen. This means that customers can benefit from a one-stop refuelling and vehicle washing service. Together with MOYA-ANWIM, we want to expand the cooperation to other locations so that over time we can create a cooperative standard between our companies.

We support sports

We have been supporting sports for a long time, especially volleyball — both beach and indoor — and our company volleyball team competes in the top division of the Łódź Amateur Volleyball League. We support the MKS Kalisz volleyball and handball teams, as well as the speedway club "OrzełŁódź."

We have established a partnership with the Skra Bełchatów men's volleyball team.

We also play an important role on the board of directors of the Sports Club.
